THE INNOVATIVE
SOLUTION FOR
SUSTAINABILITY COMPLIANCE

A KUMAVISION GROUP COMPANY

WHAT IS EOS POWER ESG

EOS POWER ESG is an **integrated, modular solution** designed to measure, analyze, and report ESG factors, with the goal of implementing a transition plan and providing ESG reporting to stakeholders.

Thanks to the capabilities of Microsoft's ERP, enhanced by specialized Apps, **EOS POWER ESG** enables companies **to meet reporting requirements** while developing a **truly sustainable management** approach within the organization.

FEATURES

Sustainability chart of accounts and emission factors:

preconfigured model with emission factors for the Italian localization, enabling companies to immediately calculate their **carbon footprint** in accordance with the **GHG Protocol**.

Statistical accounts:

preconfigured model of statistical accounts for **Social** and **Governance** metrics, as well as for the **Environmental** section not included in the carbon footprint calculations.

VSME questionnaire:

allows one-click generation of the questionnaire compliant with **EFRAG-VSME** (**V**oluntary **D**isclosure for **S**mall and **M**edium **E**nterprises) sustainability reporting principles, automating data entry and managing assigned roles.

AI-generated Sustainability Report:

enables the creation of an editable **Sustainability Report through AI**, including **comments** on the VSME questionnaire data.

ESG Reporting:

supports **compliance with the CSRD** and major international standards, distinguishing between “material” and “non-material” **data points**, and preparing data for the **XBRL sustainability taxonomy**.

PowerBI dashboard:

provides an interactive **ESG data clustering model**, connectable to energy consumption data, carbon footprint (**Scopes 1, 2, and 3**) and **statistics** for each of the three ESG pillars.

WHY EOS POWER ESG?

EOS Power ESG leverages the standard functionalities of Business Central while **integrating sustainability measurements and reporting**.

Certified **carbon footprint** calculations, with ready-to-use emission factors.

Efficient and accurate **ESG data** collection.

Generation of **sustainability reports** using ESG data.

Governance of processes for sustainability data.
